免疫原
Synthetic Peptide within Human CAMP aa 50-100. The exact immunogen used to generate this antibody is proprietary information.; P49913

特异性
There is 71% homology between the immunogen and mouse cathelicidin/CLP. This antibody has been published (see PubMed: 21724991) with mouse samples, but we were unable to see an appropriately sized band in mouse spleen or small intestine by WB. It may be that certain lots have worked with mouse, but we are unable to guarantee cross-reactivity with mouse after our testing.
