Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)	IHCP	Human	已验证	When staining mouse tissue with a mouse monoclonal antibody, a Mouse-on-Mouse (MOM) staining protocol is recommended to help reduce background staining caused by endogenous mouse IgG and Fc receptors. When conducting experiments using secondary antibodies conjugated with fluorescent labels, it is recommended to add 1% BSA and a final concentration of 0.3M glycine to the blocking solution to quench the autofluorescence induced by aldehyde groups. Perform heat-mediated antigen retrieval before commencing with IHC staining protocol.	-
Western blot	WB	Human	已验证	-	-
