The exact immunogen used to generate this antibody is proprietary information.

特异性

The immunogen used for this product shares 6 continuous identical amino acids with SIKE1. Cross-reactivity with this protein has not been confirmed experimentally.Expression levels of the target protein vary with sample type and some optimisation may be required (PMID: 27285327). For western blot using cell lines, it may be necessary to collect cell culture supernatant for endogenous FGF21 detection as the target protein is readily secreted (PMID: 24041694; PMID: 26691139).RB9A37017246 is not recommended for mouse WB or human IHC-P..
