特异性

This antibody is specific for the three CEBPB isoforms (LAP*, LAP and LIP). According to BLAST analysis, the antibody could cross-react with CEBP epsilon (32, 27 and 14kDa, 82% homology) and CEBP alpha (42kDa, 30kDa, 73% homology) in human, mouse and rat. Please be aware that this has not been confirmed experimentally. However, this could explain the background that could possibly be obtained in WB with this antibody. Please contact our Scientific Support if you have any questions.
