特异性
This antibody is specific for Myc tagged proteins. The Myc tag epitope (EQKLISEEDL) is located at the dimerization site of c-myc and therefore this antibody does not perform well at recognizing endogenous c-myc. A publication by Baker AM et al. 2016 (PMID: 26826706 DOI: 10.1111/his.12939) shows the IHC staining generated by the clone does not correlate with c-myc mRNA expression.
