产品描述

Iv0048 is a monoclonal antibody that neutralizes Growth Differentiation Factor-15 (GDF15), a stress-induced cytokine implicated in metabolic regulation, inflammation, and disease-related tissue responses. By blocking GDF15, Iv0048 is used in research to restore normal immune or metabolic signaling, model GDF15-driven conditions such as cancer cachexia and chronic inflammation, and explore therapeutic strategies aimed at reducing GDF15-mediated immune suppression and metabolic dysfunction.
